DGiT wins ATUG Industry Award for Innovations in Communications

DGiT Consultants (DGiT), a specialist telecommunications service provider delivering advanced operational solutions to national and international carriers, has been awarded the prestigious ATUG Industry award for *Innovations in Communications* for 2009.

Emma Dean-Graham, CEO of DGiT, was presented with the award by Stephen Conroy, Federal Communications Minister and ATUG Chairman, David Swift and Vice Chairman, Paul Morris in front of 500 national and international IT&T peers during the annual ATUG Gala Dinner Awards night held in Sydney on 12 March.

Criteria for the award covered benefit to end users, innovation for the telecommunications industry and quality of service. The award recognises product and service developers who have delivered a service or product that has contributed to the development of the communications industry and to the business sector in Australia.

DGiT received the award for its *DGiT Telflow* software solution. Telflow is a suite of highly adaptable software tools designed to integrate and streamline provisioning and service management for telecommunications providers. *Telflow* is expected to be an important factor in the industry wide integration of carrier and telecommunications provisioning systems into the NBN (National Broadband Network) federal government initiative.

"I sincerely congratulate DGiT on receiving this industry award. It's a true recognition of the achievements the company has made over the last few years. DGiT is a breath of fresh air with its innovative approach to doing business, whilst at the same ensuring it provides a high quality service," said Ian Noble, Acting CEO, Uecomm.

Dean-Graham said, "I believe this award validates what I have firmly believed for some time. DGiT is a clever, progressive and exciting organisation that is capable of anything this industry throws at us. We will continue to attract, nurture and build on the best talent to bear on the most critical problems within our industry. I am very proud of the entire DGiT team and am especially mindful of the extraordinary contribution Greg Tilton, our Director of Technology and Architecture, has made in enabling us to receive this award."
